

Dataset

The passengers on titanic,with features consisted of sex,pclass,age etc.The goal is to predict whether they survived or not.

PassengerId	# Survived	# Pclass	Name	Sex	Age	SibSp

Accuracy

The dataset has been split into two groups, training set and test set.

Accuracy = the proper predictions / the number of test cases

```
Correct predictions: 356  
Total test cases: 418  
Accuracy: 0.851675  
  
Process returned 0 (0x0)   execution time : 0.739 s
